

CLEANING INSTRUCTIONS

Do not hose down your seamer. **Your Model 25D Seamer is not waterproof.** We sent a spray bottle and a sample of non-rinse brewery cleaner (Star San is a popular brand). To clean:

- 1- Spray the seamer with the non-rinse brewery cleaner and thoroughly wipe off all the beer and foreign matter daily. Beer will act like a glue if left to harden on the seamer
- 2- Lubricate daily (see page 3 of your manual)
- 3- Place a little dab of grease on the end of the baseplate adjustment screw daily, and oil the stem with the food grade oil
- 4- Once a week, remove the seam rolls one at a time (they are different and must be returned to the proper seam roll arm)
- 5- Clean the seam rolls, seam roll bushings, seam roll pins, and seam roll arms once a week (see page 2 of your manual for the schematic)
- 6- Remember, the seam roll pins (screws) are reverse threaded so you will need to turn them clockwise to loosen and counterclockwise to tighten
