

Dear Shareholders, Stakeholders and Interested Parties

CO2 GRO Inc. is pleased to present a Recent National Investor recommendation of the Company.

“CO2 GRO is added as a "BUY" to my list of Speculative-rated stocks” Chris Temple, Editor/Publisher, The National Investor.

CO2 GRO, Inc. (TSXV-GROW; OTCQB-BLONF)

Yesterday's close -- C\$0.15/share, or US\$0.116/share

I have likewise been following the progress of CO2 GRO, of which you can learn a LOT more RIGHT HERE, for quite some time now. I have from the get-go been both intrigued by *and sold on the company's proprietary and patented technologies to accelerate plant growth via the super-charged delivery of needed CO2 (carbon dioxide) to plants of all kinds (and some related science as well.)*

I've waited until now to recommend this tiny, emerging "ag tech" company, though, for two reasons:

1. Most of the attention to date has had to do with GROW's ability/business to help growers of **marijuana** do better. As that entire space pretty much remains bombed out (though glimmers of a turn are visible, which I'll also be discussing near term) that hasn't had people exactly racing to learn more about GROW.
2. I've also been watching to see how effectively the company can **monetize** its fascinating technology; *and it's been starting to show signs of an ability to do so at an increasing rate.*

I huddled with management late last week to get more details on the latest news, most notably THIS RELEASE two weeks ago. **Most notable is the new involvement as an**

investor and more in GROW by Ospraie Ag Science, LLC - a collaboration which should see GROW's business begin to increase exponentially.

Frankly--though I believe the marijuana/cannabis space will prove fertile ground for GROW *still* in the years ahead--I am equally as jazzed about *food*.

One of the many lessons we have all learned from the Covid-19 fallout is that **Americans have a greater understanding of the needs to get more of our produce locally**. Businesses seeing to that all along the food production chain are building local vertical farms, greenhouses and more; an industry that is in the early stages of a MASSIVE growth surge (and one where I'll soon have additional recommendations forthcoming!)

GROW's technology can be a big part of all this. So while it is still a micro-cap, speculative company, I've now seen enough to pull the trigger here.

CO2 GRO is added as a "BUY" to my list of Speculative-rated stocks.

**"You can get information anywhere.
Here, you get *knowledge*."**
