## **CAN (ON): CO2 GRO Inc. announces a commercial demonstration with a Canadian cannabis producer**

Toronto based CO2GRO Inc. announced it has signed a Commercial Demonstration Proposal with a Canadian Cannabis Producer. The Demo will run from mid-December 2019 to June 2020.

The objectives of this Demo are: greater yield while optimizing resources including faster cannabis plant growth for more harvests, more bud and overall plant biomass, and more cannabinoid production. Upon successful completion of the Demo, GROW anticipates installing a complete CO2 Delivery Solutions system throughout the Client's facility in Canada and potentially at the Client's international facility.

The Client's proprietary cultivation method creates a virtually odorless cannabis product.

According to John Archibald, GROW's CEO "With now hundreds of Health Canada approved cannabis producers, we look forward to more Canadian demonstrations of our CO2 Delivery Solutions technology with cannabis producers to showcase its numerous benefits."
