

XINATIS Successfully Supports International Aircraft Transition Project Across Multiple Jurisdictions

Toronto, Canada – September 27, 2023 – XINATIS successfully completed a complex aircraft transition project involving the relocation of an aircraft from the Oceania region to the Eastern United States.

The mandate required detailed project management, technical coordination, regulatory support, and stakeholder engagement throughout the aircraft transition process. XINATIS worked closely with aircraft manufacturers, technical providers, and government agencies to facilitate the movement of the aircraft while ensuring compliance with all operational and regulatory requirements.

The project scope included technical management activities, OEM coordination for operational approvals, support for ferry permit applications, and engagement with multiple governmental authorities responsible for aircraft movement approvals across various jurisdictions.

“Successfully relocating aircraft across international jurisdictions requires a coordinated approach that brings together technical expertise, regulatory knowledge, and strong industry relationships,” said Sameer Adam, President & CEO of XINATIS.

About XINATIS

XINATIS offers more than 200 years of combined experience derived from various segments of the aviation industry including aircraft and engine OEMs, airlines, business aviation operators, financiers, lessors, and support services providers.

Our team has established an extensive network in the aviation sector across commercial aviation, business aviation, special mission aircraft operations, aircraft leasing and financing, and technical services.

We offer an established global network of high-value relationships to support all aspects of aviation business requirements through our senior team of former airline CEOs, OEM executives, financiers, and aviation specialists.

Our strategy-based approach is shaped by extensive expertise, deep market knowledge, and trusted affiliated partnerships covering commercial airlines, business aviation, and special mission operations worldwide.
